Monitoring the Health of Your Facility

Fraser, MI, July 21, 2011- The AccuPoint-HC system is designed to reduce hospital acquired infections (HAI) that are a significant cause of extended patient stays, rising facility costs and even mortality rates. Independent studies have shown that environmental surfaces are a leading source for HAI's. Adoption of an auditing program utilizing the AccuPoint-HC removes the subjectivity to evaluating cleaning effectiveness, and will provide actionable data from trending results. Feedback from testing can be used for training of staff, and documentation of facility improvement - always a key focus of Joint Commission, CMS and other auditing bodies.

Healthmark's AccuPoint-HC system is the first product of its kind to be customized for the healthcare setting. It can analyze a collected sample in 30 seconds and indicate whether a surface is clean. This includes the information displayed on the reader as well as the powerful Data Manager software. Track and trend data to spot problem areas, document results, and demonstrate total quality improvement with this powerful software, included with the reader. The unique design of the collection sampler is superior to traditional swabs. The flat surface comes in complete contact with the area being sampled, insuring a more thorough and accurate result. The self contained cartridge is a complete and easy to use tool whose design minimizes the opportunity for false positive results from poor collection technique.

About Healthmark Industries Co., Inc.

Since 1969, Healthmark Industries Company, Inc. has developed and marketed innovative solutions to aid healthcare facilities in their delivery of surgical instruments and other life saving medical devices to patients. Healthmark Industries mission is to continue to innovate, continue to support and continue to serve the healthcare provider industry and support services that make it possible to deliver quality healthcare.
