Healthmark Introduces New Distal Soak

Fraser, MI, February 5, 2016 - Healthmark Industries has announced the addition of the Distal Soak to its line of Instrument Retrieval products. The tubes are manufactured from polypropylene, paired with silicone lids and an optional Plexiglas® tube holder (sold separately) is ideal for proper handling.

The Distal Soak is designed to protect the delicate tips, and keep the distal end of surgical instruments moist after clinical use to facilitate cleaning. They are available in two styles: Closed hole cap that is filled with solution prior to inserting the device; Or, open hole cap design that is used when flushing the solution through the internal channel of the device in compliance with the device manufacturer's IFU. The use of the Distal Soak will help to prevent drying of gross contaminants of the soiled device before cleaning procedures begin.
