Healthmark, a Getinge Company, Introduces SafeGuard Dry: Sterilization Wrap Engineered for Wet Pack Management

Fraser, MI – June 2, 2025– Healthmark, a Getinge company, is proud to announce the launch of **SafeGuard Dry**, a sterilization wrap purpose-built to combat one of the most persistent challenges in Sterile Processing Departments (SPDs): wet packs.

Featuring an innovative **dual-layer design**, SafeGuard Dry combines an absorbent **wetlaid material** with a fluid-resistant **SMS barrier**, working together to reduce retained moisture in wrapped instrument sets post-sterilization. Optimized for both **steam and EO sterilization**, this lightweight yet durable wrap maintains sterility during storage and transport, and helps prevent costly processing delays.

“Wet packs disrupt workflows, delay surgeries, and put patient safety at risk,” said **Kevin Anderson, RN, Sr. Manager, Commercial Education Services at Healthmark**.

“SafeGuard Dry is designed specifically to solve this problem—unlike general-purpose wraps—so technicians can be confident their instruments are both dry and sterile.”

SafeGuard Dry offers a reliable solution for departments struggling with recurring moisture issues. With standard sizes and compliance with **AAMI ST79’s simultaneous wrapping standards**, it’s built for performance without complexity.

As Healthmark expands its presence in sterile packaging, SafeGuard Dry sets the foundation for a growing platform of solutions—with additional innovations on the horizon.

“SafeGuard Dry represents a strategic expansion of our sterilization consumables,” said **Chris Turner, Head of Sales and Marketing at Healthmark**. “We’re not just entering the wrap market—we’re elevating it.”
